

## Product Features

- \* Ideal cutting grid for straightforward installation*
- \* Narrowed spacing for increased heat efficiency*
- \* Conductive diffusion channels for uniform comfort*
- \* Simple, eco-friendly design with all plywood components*
- \* Two product lines for residential or commercial applications*

## HeatPly Radiant Heating Underlayment Systems

Noyes Enterprises is proud to introduce HeatPly, a radiant heat underlayment system whose ideal cutting grid allows for installation in either residential or commercial properties. HeatPly works with hydronic heating systems, which are one of the most popular and cost effective methods of generating heat.

Hydronic radiant floor systems pump boiler-heated water through tubing laid underneath the floor. HeatPly uses narrower piping channels to conduct heat faster, allowing for warmer flooring in less time. Additionally, the uniform size of the piping channels allow for consistent heat conductivity.
